

Keyboard Skins & Biosafe® Antimicrobial Skins

Our New Built In **BIOSAFE®**
*reduces bacteria,
mildew, & mold!*¹

We now offer keyboard skins coated with Biosafe® anti-microbial compounds in order to help damage and reduce bacteria, mold, and mildew commonly present on a keyboards' surface.

The integrated Biosafe® substrates are well-suited for high interaction environments that are:

- Prone to bacterial growth
- Sensitive to the presence of bacteria, mold, and mildew

The resistant anti-microbial polymers found on the keyboard skins maintain the same protection of a standard keyboard skin, while resisting the growth of foreign micro-organisms.

The extreme presence and spread of antibiotic resistant strains of bacteria within medical environments – such as hospitals, doctors' offices, and surgery centers – is a growing national concern. Buy PC Supplies' Biosafe® anti-microbial keyboard skins can substantially curtail the presence of these micro-organisms¹.

¹ The anti-microbial protects the cover and does not necessarily extend that protection to the user.
